2. Automation Web
   10 Scenario, 19Test Case

Scenario	Test case
Login	Unregistered User Unverifi User Invalid Password Sukses Login
Register	Registered User Sukses Daftar
Profile	UI Profile Sukses Change Profile
Filter	Filter salah satu kategori Filter semua kategori
Nego	Nego with valid price Nego with inputing charachter not an number Nego with inputing more than real price
Sell	Success Add New Sell Failed Add New Sell Product (wrong format Harga Produk) Failed Add New Sell Product (not input Nama Produk)
Product Diminati	User want to see fitur produk diminati
Product Terjual (kategori list)	User want to see fitur produk terjual
Logout	User berhasil logout

3. Automation Mobile
   4 Scenario, 6 Test Case

Scenario	Test case
Login	Sukses Login
Register	Sukses Daftar
Sell	Failed Add New Sell Product (not upload Foto Produk) Failed Add New Sell Product (not input Nama Produk) Success Add Sell Product
Logout	Berhasil logout

4. Report Web
   Ada di folder report
   Report/Web/cucumber-coba.html/index.html

▼ @Daftar **Feature**: Title of your feature
  I want to use this template for my feature file
  ▼ @R001 **Scenario Outline**: Register w/ registered user
    Given User input registered nama <nama> email <registeredemail> and password <password>
    When user verify unsucess register
    Then close browser
  ▼ **Examples**:

nama	registeredemail	password
userregistered	cobaregister6@yopmail.com	cobaregister6

  ▼ @Daftar @R001 **Scenario Outline**: Register w/ registered user
    Given User input registered nama userregistered email cobaregister6@yopmail.com and password cobaregister6
    When user verify unsucess register
    Then close browser
  ▼ @R002 **Scenario Outline**: Register w/ unregister user
    Given User click button masuk
    When User input unregister nama <nama> email <unregisteremail> and password <password>
    And User click button daftar
    And user verify success register
    Then close browser
  ▼ **Examples**:

nama	unregisteremail	password
user unregistered	cobaregister15@yopmail.com	cobaregister15

  ▼ @Daftar @R002 **Scenario Outline**: Register w/ unregister user
    Given User click button masuk
    When User input unregister nama user unregistered email cobaregister15@yopmail.com and password cobaregister15
    And User click button daftar
    And user verify success register
    Then close browser

▼ @Login **Feature**: Title of your feature
  I want to use this template for my feature file
  ▼ @L001 **Scenario Outline**: Test Login without unregistered user
    When User input username <username> and password <password>
    And User click login
    And Display pop up warning unregistered username to user
    Then close browser
  ▼ **Examples**:

username	password
binarqa12@gmail.com	students1234

  ▼ **Background**:
    Given User click button masuk
  ▼ @Login @L001 **Scenario Outline**: Test Login without unregistered user
    When User input username binarqa12@gmail.com and password students1234
    And User click login
    And Display pop up warning unregistered username to user
    Then close browser
  ▼ @L002 **Scenario Outline**: Test Login with Invalid Password
    When User input username <username> and password <password>
    And User click login
    And Display pop up warning invalid password to user
    Then close browser
  ▼ **Examples**:

username	password
binarqae1@gmail.com	students12345

  ▼ **Background**:
    Given User click button masuk
  ▼ @Login @L002 **Scenario Outline**: Test Login with Invalid Password
    When User input username binarqae1@gmail.com and password students12345
    And User click login
    And Display pop up warning invalid password to user
    Then close browser

▼ @L003 **Scenario Outline**: Test Login with unverif email
    When User input username <username> and password <password>
    And User click login
    And Display pop up warning unverif username
    Then close browser
    ▼ **Examples**:

username	password
cobaregister9@yopmail.com	cobaregister9

▼ **Background**:
    Given User click button masuk
▼ @Login @L003 **Scenario Outline**: Test Login with unverif email
    When User input username cobaregister9@yopmail.com and password cobaregister9
    And User click login
    And Display pop up warning unverif username
    Then close browser

▼ @L004 **Scenario Outline**: Test Login with Valid Password
    When User input username <username> and password <password>
    And User click login
    And User navigate to homepage
    Then close browser
    ▼ **Examples**:

username	password
cobaregister6@yopmail.com	cobaregister6

▼ **Background**:
    Given User click button masuk
▼ @Login @L004 **Scenario Outline**: Test Login with Valid Password
    When User input username cobaregister6@yopmail.com and password cobaregister6
    And User click login
    And User navigate to homepage
    Then close browser

▼ @Logout **Feature**: Title of your feature
  I want to use this template for my feature file
  ▼ @Logout @Logout-01 **Scenario**: Title of your scenario outline
    Given User login
    When User logout
    Then close browser

▼ @Nego **Feature**: Bid Feature
  I want to bid the product
  ▼ **Background**:
    Given User login
  ▼ @Nego @N-01 **Scenario**: Nego with valid price
    When User click on the product card1
    And User click on button buy product
    And User input valid price
    And User click button kirim
    And User success bidding the product
    Then close browser
  ▼ **Background**:
    Given User login
  ▼ @Nego @N-02 **Scenario**: Nego with inputing charachter not an number
    When User click on the product card2
    And User click on button buy product
    And User input character on price field
    And User click button kirim
    And User should'nt success bidding the product
    Then close browser
  ▼ **Background**:
    Given User login
  ▼ @Nego @N-03 **Scenario**: Nego with inputing more than real price
    When User click on the product card3
    And User click on button buy product
    And User input field price with more than nominal of the normal price
    And User click button kirim
    And User should'nt success bidding the product
    Then close browser

▼ **@ProdukDiminati** **Feature**: accept or reject buyer's bid
  ▼ **Background**:
    Given User login
  ▼ **@ProdukDiminati @PD-01** **Scenario**: terima nego
    When User click burger icon01
    And User click button diminati01
    And User click card product01
    And User click button terima01
    And User success terima nego pembeli
    Then close browser
  ▼ **Background**:
    Given User login
  ▼ **@ProdukDiminati @PD-02** **Scenario**: Terima jual
    When User click burger icon02
    And User click button diminati02
    And User click card product02
    And User click button terima02
    And User success tolak nego pembeli
    Then close browser

▼ **@Profile** **Feature**: Title of your feature
  I want to use this template for my feature file
  ▼ **Background**:
    Given User login
  ▼ **@Profile @B001** **Scenario**: Check UI Profile
    When User click account
    And User click profile
    And user verify component
    And user click home
    Then close browser
  ▼ **Background**:
    Given User login
  ▼ **@Profile @B002** **Scenario**: Submit Change Profile
    When User click account
    And User click profile
    And user klik submit
    And verify success change profile
    And user click home
    Then close browser

▼ **@SellProduct** **Feature**: Sell Product
  I want to use this template for my feature file
  ▼ **@A001** **Scenario Outline**: Success Add New Sell Product
    When Click + Jual button
    And Input correct Nama Produk, Harga Produk, Kategori and Deskripsi
    And Click Terbitkan button
    Then close browser
  ▼ **Examples**:

username	password
binarqae1@gmail.com	students1234

  ▼ **Background**:
    Given User login
  ▼ **@SellProduct @A001** **Scenario Outline**: Success Add New Sell Product
    When Click + Jual button
    And Input correct Nama Produk, Harga Produk, Kategori and Deskripsi
    And Click Terbitkan button
    Then close browser
  ▼ **Background**:
    Given User login
  ▼ **@SellProduct @A002** **Scenario**: Failed Add New Sell Product (wrong format Harga Produk)
    When Click + Jual button
    And Input Nama Produk, wrong format Harga Produk, Kategori and Deskripsi
    And Click Terbitkan button
    Then close browser
  ▼ **Background**:
    Given User login
  ▼ **@SellProduct @A003** **Scenario**: Failed Add New Sell Product (not input Nama Produk)
    When Click + Jual button
    And Input Harga Produk, Kategori and Deskripsi
    And Click Terbitkan button
    Then close browser

▼ @TKategori **Feature**: Title of your feature
I want to use this template for my feature file
▼ **Background**:
Given User login
▼ @TKategori @K001 **Scenario**: User checking all categories
When User klik kategori Hoby
And User klik kategori Kendaraan
And User klik kategori Baju
And User klik kategori Elektronik
And User klik kategori Kesehatan
And Filtering by All Categories success
Then close browser
▼ **Background**:
Given User login
▼ @TKategori @K002 **Scenario**: User try to filter one of the categories
When User klik kategori Semua
Then User success filter Semua Categories

5. Report Android
Ada di folder report
Report/Android/cucumber-coba.html/index.html

▼ @login **Feature**: login
I want to login
▼ @tag1 **Scenario Outline**: login
When User login to account and enter username <username> and password <password>
And Click Masuk Button
Then User Navigate to login page
▼ **Examples**:

username	password
studentqa2@binar.id	studentQA2

▼ **Background**:
Given User start apps
▼ @login @tag1 **Scenario Outline**: login
When User login to account and enter username studentqa2@binar.id and password studentQA2
And Click Masuk Button
Then User Navigate to login page

▼ @Logout **Feature**: logout aplikasi
I want to logout
▼ @tag1 **Scenario Outline**: logout aplikasi
When User login to account and enter username <username> and password <password>
And Click Masuk Button
Then User Navigate to login page
Then User click logout
▼ **Examples**:

username	password
studentqa2@binar.id	studentQA2

▼ **Background**:
Given User start apps
▼ @Logout @tag1 **Scenario Outline**: logout aplikasi
When User login to account and enter username studentqa2@binar.id and password studentQA2
And Click Masuk Button
Then User Navigate to login page
Then User click logout

▼ @registermobile **Feature**: Register
  I want to register newmember
  ▼ @tag1 **Scenario Outline**: Register Mobile
      When User click Akun
      Then User Click masuk
      Then User Click Daftar
      Then User enter nama <name> and email <email> and password <password> and nomorHP <nomorHP> and kota <kota> and alamat <alamat>
      Then Click Daftar
      Then User navigate akun page
    ▼ **Examples**:

name	email	password	nomorHP	kota	alamat
Daniel.IK	binarGGWPEZ@gmail.com	satusampailima	081232424	yogyakarta	jogjakota

▼ **Background**:
      Given User start apps
  ▼ @registermobile @tag1 **Scenario Outline**: Register Mobile
      When User click Akun
      Then User Click masuk
      Then User Click Daftar
      Then User enter nama Daniel.IK and email binarGGWPEZ@gmail.com and password satusampailima and nomorHP 081232424 and kota yogyakarta and alamat jogjakota
      Then Click Daftar
      Then User navigate akun page

▼ @sellProduct **Feature**: Sell Product
    User need to add some product for sell
    ▼ @sell1 **Scenario Outline**: Post new sell product without upload picture
        When User login to account and enter username <username> and password <password>
        And Click Masuk Button
        And Click + Button
        And Input Product field information without upload picture
        Then Click Terbitkan Button
      ▼ **Examples**:

username	password
studentqa2@binar.id	studentQA2

▼ **Background**:
        Given User start apps
    ▼ @sellProduct @sell1 **Scenario Outline**: Post new sell product without upload picture
        When User login to account and enter username studentqa2@binar.id and password studentQA2
        And Click Masuk Button
        And Click + Button
        And Input Product field information without upload picture
        Then Click Terbitkan Button
    ▼ @sell2 **Scenario Outline**: Post new sell product without input Nama Product
        When User login to account and enter username <username> and password <password>
        And Click Masuk Button
        And Click + Button
        And Input Product field information without input Nama Product
        Then Click Terbitkan Button
      ▼ **Examples**:

username	password
studentqa2@binar.id	studentQA2

▼ **Background**:
        Given User start apps
    ▼ @sellProduct @sell2 **Scenario Outline**: Post new sell product without input Nama Product
        When User login to account and enter username studentqa2@binar.id and password studentQA2
        And Click Masuk Button
        And Click + Button
        And Input Product field information without input Nama Product
        Then Click Terbitkan Button

▼ @sell3 **Scenario Outline**: Post new sell product
    When User login to account and enter username \<username\> and password \<password\>
    And Click Masuk Button
    And Click + Button
    And Input complete Product field information
    Then Click Terbitkan Button
  ▼ **Examples**:

username	password
studentqa2@binar.id	studentQA2

▼ **Background**:
    Given User start apps
▼ @sellProduct @sell3 **Scenario Outline**: Post new sell product
    When User login to account and enter username studentqa2@binar.id and password studentQA2
    And Click Masuk Button
    And Click + Button
    And Input complete Product field information
    Then Click Terbitkan Button

▼ @sell3 **Scenario Outline**: Post new sell product
    When User login to account and enter username \<username\> and password \<password\>
    And Click Masuk Button
    And Click + Button
    And Input complete Product field information
    Then Click Terbitkan Button
